

## PROJECT

### Transboundary water management adaptation in the Amudarya basin to climate change uncertainties

#### Report

- 3.1. Conduct series of simulation for different scenarios for 2016-2055
- 3.1.2.6. Trends of water demand by economic sector, cropping pattern, and yield for the planning zones based on scenarios for 2016-2055 and taking into account innovations

Project coordinator

Prof. V.Dukhovniy

Responsible for 3.1.

A. Sorokin

Executor of 3.1.2.6.

Sh. Kh.Muminov

Tashkent – 2017

2.1. Turkmenistan .....	14

## I. BASIC CONCEPTS

### Research objective and tasks

**Research objective** is calculating forecast indicators of water consumption in the household and industry sectors based on the current trends and population growth in the future and on the long-term strategy for industrial development in the Amudarya basin countries.

Given that, the following **tasks** were set:

- calculate forecast indicators of water consumption in the household sector in the planning zones in the Amudarya basin until 2055
- calculate forecast indicators of water consumption in industry in the planning zones in the Amudarya basin until 2055

### Research methodology

The **methodology** is based on systematic approach and dialectical method, which in dynamics allow considering patterns and processes related to state regulation, as well as to population growth in the future and long-term strategy for industrial development in the Amudarya basin countries.

In the research, various methods were applied: abstract-logical one, systematization and classification, expert evaluation, analysis and synthesis, statistical analysis, comparison, plotting time series, and plotting trend lines (approximation and smoothing).

## I. FORECAST OF WATER CONSUMPTION IN THE HOUSEHOLD SECTOR IN THE PLANNING ZONES IN THE AMUDARYA BASIN UNTIL 2055

### 1.1. Republic of Uzbekistan

Forecast of water consumption in the household sector in the Uzbek part of the Amudarya basin until 2055
